Block 3: Executive Sales & Revenue Analytics Console

Technical Project Documentation & Implementation Blueprint • Google Sheets Architecture

PROJECT DOMAIN	APPLICATION	DESIGN AESTHETIC	ARCHITECTURE
Financial Analytics	**Google Sheets**	**Apple Dark Mode (#121212)**	**4-Sheet Relational Model**

1. Executive Summary & Core Objectives

This technical documentation outlines the end-to-end design, data structuring, calculation engineering, and visual dashboarding implemented for Block 3 of the enterprise analytics portfolio. The project establishes an Apple-grade minimalist dark-mode command center in Google Sheets, engineered to ingest raw sales records, compute dynamic aggregations, and deliver real-time executive intelligence through interactive slicers and customized dark-themed data visualizations.

2. Complete Workbook Architecture

The solution is organized into four purpose-built operational sheets, ensuring strict separation of raw data intake, calculation engines, user interfaces, and reference metadata:

- `Raw_Data`: Houses 100 enterprise sales transaction records complete with unique identifiers, timestamps, geographic regions, product categories, quantities, unit pricing, and sales representatives.
- `Pivot_Engine`: Functions as the automated calculation backbone, utilizing robust lookup and aggregation formulas to synthesize totals by region and product line.
- `Dashboard`: Serves as the executive command center featuring top-line KPI summary cards, linked summary tables, custom dark charts, and interactive Slicers.
- `Lookup_Reference`: Maintains master commissioning tiers, incentive schedules, regional targets, and manager mappings formatted with custom dark zebra striping.

3. Calculation Engineering & Core Formulas

All quantitative metrics across the dashboard are powered by dynamic, audit-ready formulas rather than static values, ensuring absolute data integrity during live filtering:

```
      # 1. Extended Line Revenue (Raw_Data Sheet) =F2*G2 # 2. Regional Revenue Aggregation
(Pivot_Engine Sheet) =SUMIF(Raw_Data!$C$2:$C$101, A2, Raw_Data!$H$2:$H$101) # 3. Top-Line
Executive KPI Metrics (Dashboard Sheet) Total Revenue: =SUM(Raw_Data!H2:H101) Total Units:
=SUM(Raw_Data!F2:F101) Transaction Count: =COUNTA(Raw_Data!A2:A101) Average Order: =B5/D5
```

4. Summary Data Model & Key Performance Indicators

The aggregation engine feeds clean summary tables on the dashboard canvas, driving both visual chart series and executive KPI blocks:

Sales Region	Units Sold	Total Revenue (USD)	Performance Status
North America	706	$440,680.00	**On Target**
Europe	0	$0.00	**Needs Review**
Asia-Pacific	428	$346,750.00	**On Target**
Latin America	414	$211,360.00	**Stable**

5. Visual Design & Slicer Integration

The final console is styled with a matte dark charcoal canvas (`#121212`), high-contrast white typography (`#FFFFFF`), and slate container fills (`#1E1E1E`). Interactivity is driven by native Slicers connected to `Sales_Region` and `Product_Category`, enabling instant executive filtering across all embedded charts and summary tables.
